SUGGESTIONS FOR FIXING AND FINISHING

These comments are provided as a guide only. Like other landscaping materials, specific applications vary and responsibility remains with the installer. This is a DIY product, basic handyman skills are required. Consult your local stockist or a landscaping professional if unsure.

- Hardwood Exteriorboard product, performs similarly to timber decking timber. It is resistant to normal run-off weathering, but not suitable for applications where submerged or closer than 100mm to ground or constant water
- Natural Tannin may release and grey or yellow over time (similar to jarrah) if left unsealed. Use decking paint or sealer products, and follow instructions or consult landscaping prof.
- Suggested minimum fixing with outdoor screws (minimum 300 centres apart).
- 45mm nominal border to accommodate typical fixing and conceal 90mm post or support.
- This is versatile product and can be cut down and fabricated as per timber, however this not a freestanding structural product

45mm nominal border to accommodate typical fixing and conceal 90mm post or support

1200x600 sheets easy for DIY or trade transport carry and install

All Australian Made & Owned

Made from Renewable Australian Hardwood tailings Robust & Hardwearing

Hardwood product resistant to run-off weathering, bloat and rot. See Suggestions For Fixing and Finishing

Cut, fix, sand and paint or seal using standard handyman timberwork tools
